(A) Benzimidazoles

(I) R = -COOH, -SO<sub>3</sub>H, -SO<sub>2</sub>X, -CO.NH.NH<sub>2</sub>, -SO<sub>2</sub>NH<sub>2</sub>, -SO<sub>2</sub>NH.R' or -SO<sub>2</sub>NH, -NHSO<sub>2</sub>R'

R' = alkyl, alkenyl, aralkyl, aralkenyl, aryl or a heterocyclic residue all of which may be substd. with one or more halogen and/or hydroxy, alkoxy, mercaptan, alkylmercapto, nitro, carboxy, alkoxycarbonyl, amino, alkylamino and/or acylamino or an alkoxycarbonyl residue

R may be at any position in the benzene ring but the 5 and 6 posn. are prefd.

R<sub>1</sub> = H or an alkyl-, alkenyl-, aralkyl-, aralkenyl-, aryl group or heterocyclic residue, all of which may be substd. with one or more halogen atoms and/or nitro, hydroxy, alkoxy, mercaptan, alkylmercapto, carboxy, alkoxycarbonyl, amino, alkylamino, and/or acylamino groups; they may be bound to the N-atom directly or via a CO- or SO<sub>2</sub>- group

R<sub>2</sub> = a heterocyclic group with 5 members, one of which is S and one or more N-atoms bound directly to the benzimidazole or via a hydrocarbon-grp. contng. 1-4 C-atoms with straight- or branched chain, either saturated or having an ethylenic bond; the other C-atoms of the heterocyclic group carry H- atoms and/or amino-, alkylamino-, carboxy- and/or alkoxycarbonyl groups and/or one or more alkyl-, aralkyl-, and/or aryl residues; these residues may carry an alcohol-, phenol- or ether oxide function.

Substd. benzimidazoles of seven main structural formulae are claimed in which the 2-posn. is always substd. by a heterocyclic ring containing an S-atom and  $\geq 1$  N atoms bound directly to the benzimidazole ring or via an alkylene gp. Addition salts with (in)organic acids, phenols and mercaptants are claimed, and also salts with ammonia, metallic and organic bases of those cpds. containing CO<sub>2</sub>H and SO<sub>3</sub>H gps. as substnts.
